Kuhn's work is assessed within the context of other philosophies of science notably logical empiricism and recent developments in naturalized epistemology. The author argues that Kuhn's thinking betrays a residual commitment to many theses characteristic of the empiricists he set out to challenge. Kuhn's influence on the history and philosophy of science is assessed and where the field may be heading in the wake of Kuhn's ideas is explored. In the past, the best papers of the conferences were published in the LNAI series. Your artist has never worked with Flash before. Your inner programmer is telling you that no OOP is a big Oops! Any Flash developer can share similar tales of woe. This book breaks down the process of Flash game development into simple, approachable steps. Never heard of a game loop before? No idea what a design pattern is? No problem! Chris Griffith gives you real-world expertise, and real-world code that you can use in your own games. Griffith has been building games in Flash long enough to know what works and what doesn't. This book helps bridge the gap for these coders who may be used to C++, Java, or C# and want to move over to Flash. Griffith covers real-world scenarios pulled from his own experiences developing games for over 10 years in the industry. Through the lens of cognitive science, Jokes and the Linguistic Mind investigates jokes that play on some aspect of the structure and function of language. In so doing, Debra Aarons shows that these 'linguistic jokes' can evoke our tacit knowledge of the language we use. Analyzing hilarious examples from movies, plays and books, Jokes and the Linguistic Mind demonstrates that tacit linguistic knowledge must become conscious for linguistic jokes to be understood. The book examines jokes that exploit pragmatic, semantic, morphological, phonological and semantic features of language, as well as jokes that use more than one language and jokes that are about language itself. Additionally, the text explores the relationship between cryptic crossword clues and linguistic jokes in order to demonstrate the difference between tacit knowledge of language and rules of language use that are articulated for a particular purpose. With its use of jokes as data and its highly accessible explanations of complex linguistic concepts, this book is an engaging supplementary text for introductory courses in linguistics, psycholinguistics and cognitive science. It will also be of interest to scholars in translation studies, applied linguistics and philosophy of language. Insofar as literary theory has addressed the issue of literature as a means of communication and the function of literary fiction, opinions have been sharply divided, indicating that the elementary foundations of literary theory and criticism still need clarifying. Many of the "classical" problems that literary theory has been grappling with from Aristotle to our time are still waiting for a satisfactory solution. Based on a new cognitive model of literature as communication, Farner systematically explains how literary fiction works, providing new solutions to a wide range of literary issues, like intention, function, evaluation, delimitation of the literary work as such, fictionality, suspense, and the roles of author and narrator, along with such narratological problems as voice, point of view and duration. Covering a wide range of literary issues central to literary theory, offering new theories while also summarising the field as it stands, Literary Fiction will be a valuable guide and resource for students and scholars of the theory of literature.
