50 Studies Every Neurologist Should Know presents key studies that shape the current clinical practice of neurology. All neurologic subspecialties are covered, with a special emphasis on neurocritical care and vascular neurology. For each study, a concise summary is presented with an emphasis on the results and limitations of the study, and its implications for practice. An illustrative clinical case concludes each review, followed by brief information on other relevant studies. This is the first book of its kind to present a collection of the most influential clinical trials in neurology that are detailed enough to be used on rounds, but still easily digestible. It is a must-read for health care professionals and anyone who wants to learn more about the data behind clinical practice. 1. The transition from Latin to vernacular languages in the late Middle Ages and the dramatic rise of a new readership produced a huge bulk of translations, particularly of religious literature in its various genres. The solutions are so multifarious that they defy any attempt to outline general theories. This is particularly visible when the same text is translated or rewritten at different times and in different languages or genres. Through a minute analysis of texts this book aims at highlighting lexical, syntactic and stylistic choices dictated not only by the source but also by new readers and patrons, or by new destinations of the works.

Established categories such as 'literalness' and 'fidelity' are thus questioned and integrated with these other factors which, while being more 'external', do nonetheless impinge on the very idea of 'translation', and consequently on its assessment. Far from being a mere transfer from one language to another, a medieval translation verges on a form of creative writing, and as such its study becomes a fascinating investigation into the very process of textual production. A practical, dynamic resource for practicing neurologists, clinicians and trainees, Bradley and Daroff's *Neurology in Clinical Practice*, Eighth Edition, offers a straightforward style, evidence-based information, and robust interactive content supplemented by treatment algorithms and images to keep you up to date with all that's current in this fast-changing field. This two-volume set is ideal for daily reference, featuring a unique organization by presenting symptom/sign and by specific disease entities—allowing you to access content in ways that mirror how you practice. More than 150 expert contributors, led by Drs. Joseph Jankovic, John C. Mazziotta, Scott L. Pomeroy, and Nancy J. Newman, provide up-to-date guidance that equips you to effectively diagnose and manage the full range of neurological disorders. Covers all aspects of today's neurology in an easy-to-read, clinically relevant manner. Allows for easy searches through an intuitive organization by both symptom and grouping of diseases. Features new and expanded content on movement disorders, genetic and immunologic disorders, tropical neurology, neuro-ophthalmology and neuro-otology, palliative care, pediatric neurology, and new and emerging therapies. Offers even more detailed videos that depict how neurological disorders manifest, including EEG and seizures, deep brain stimulation for PD and tremor, sleep disorders, movement disorders, ocular oscillations, EMG evaluation, cranial neuropathies, and disorders of upper and lower motor neurons, as well as other neurologic signs. Reporting on the latest advances made in treating multiple sclerosis (MS) and continuing the high standards set by earlier editions, the *Handbook of Multiple Sclerosis*, Third Edition examines a wide range of topics from etiology to treatment options.
