SURVEYING: PRINCIPLES & APPLICATIONS, 9/e is the clearest, easiest to understand, and most useful introduction to surveying as it is practiced today. It brings together expert coverage of surveying principles, remote sensing and other new advances in technological instrumentation, and modern applications for everything from mapping to engineering. Designed for maximum simplicity, it also covers sophisticated topics typically discussed in advanced surveying courses. This edition has been reorganized and streamlined to align tightly with current surveying practice, and to teach more rapidly and efficiently. It adds broader and more valuable coverage of aerial, space and ground imaging, GIS, land surveying, and other key topics. An extensive set of appendices makes it a useful reference for students entering the workplace. "The Seventh Edition has been written with students like you in mind who are encountering organic chemistry for the first time. When learning and studying organic chemistry, you first must master fundamental principles of structure and reactivity that will then serve as the foundation on which to lay subsequent information. When we put a puzzle together, as depicted in the cover image of this book, we must work piece by piece until the larger picture comes into view. Similarly, the individual steps to learning organic chemistry are quite simple; each by itself is relatively easy to master. But there are many pieces involved in learning organic chemistry -- far too many to memorize. One would never try to memorize the position of each piece within a 500 piece puzzle! Mastering organic chemistry requires an understanding of fundamental principles and the ability to use those principles to reason, analyze, classify, and predict."-- Designed for the three-semester engineering calculus course, CALCULUS: EARLY TRANSCENDENTAL FUNCTIONS, Sixth Edition, continues to offer instructors and students innovative teaching and learning resources. The Larson team always has two main objectives for text revisions: to develop precise, readable materials for students that clearly define and demonstrate concepts and rules of calculus; and to design comprehensive teaching resources for instructors that employ proven pedagogical techniques and save time. The Larson/Edwards Calculus program offers a solution to address the needs of any calculus course and any level of calculus student. Every edition from the first to the sixth of CALCULUS: EARLY TRANSCENDENTAL FUNCTIONS has made the mastery of traditional calculus skills a priority, while embracing the best features of new technology and, when appropriate, calculus reform ideas.
