The photos in this edition are black and white. Mitsubishi's 4G63t engine is among the most powerful engines ever in the sport-compact world. It's not uncommon to find one of these four-cylinder, iron-block, aluminum-headed, 2-liter turbocharged monsters making more than 1,000 horsepower with the right modifications and tuning - well above the 200-300 hp produced in the factory-made engines. Bolted into such cars as the Mitsubishi Lancer Evolution, Eclipse, and Galant, and the Eagle Talon and Plymouth Laser, the 4G63t has more than a cult following among sport-compact enthusiasts, who know and respect this engine's immense performance potential at the track or on the street. Up until now, in-depth performance information on the 4G63t has been hard to find. For this book, author Robert Bowen went straight to the source, Robert Garcia of Road/Race Engineering in Santa Fe Springs, California. RRE is the most well-known and respected Mitsubishi turbo performance shop in the United States, and Garcia is its in-house engine builder. Mitsubishi enthusiasts will benefit from Garcia's expertise and be able to build better, stronger engines than ever before. "How to Build Max-Performance Mitsubishi 4G63t Engines" covers every system and component of the engine, including the turbocharger system and engine management. More than

just a collection of tips and tricks, this book includes a complete history of the engine and its evolution, an identification guide, and advice for choosing engine components and other parts. Profiles of successful built-up engines show the reader examples of what works, and the book includes helpful guidance for choosing your own engine building path. Professional technicians count on Chilton's you can too! This book is the first-ever study of Malta's major eighteenth-century composer, Benigno Zerafa (1726-1804), a specialist in sacred music composition. Zerafa's large-scale and small-scale vocal and choral works, mostly written during his long service as musical director at the Cathedral of Mdina, have been winning increased recognition in recent years. In addition to describing and

analysing this extensive corpus, the book gives an account of Zerafa's sometimes eventful career against the wider background of the rich musical and cultural life in Malta, especial attention being paid to its strong links with Italy, and particularly Naples, where Zerafa was a student for six years. It examines in detail the complex relationship of music to Catholic liturgy and investigates the distinctive characteristics of the musical style, intermediate between baroque and classical, in which Zerafa was trained and always composed: one that today is commonly labelled galant. Well stocked with music examples, the book makes copious reference to Italian and Maltese composers from Zerafa's time and to modern analytical studies of Italian music from the middle decades of the eighteenth century, thereby offering a useful general commentary on the galant period. Its central aim, however, is to stimulate further interest in, and revival of, Zerafa's music. To this end the book contains a complete work-list with supplementary indexes. Scholars and students of eighteenth-century music, in particular sacred music, the galant style and Italian music, will find it invaluable. FREDERICK AQUILINA is Senior Lecturer in Music Studies at the University of Malta. This manual suggests design operating and performance criteria for specific surface water quality conditions to provide the optimum protection from microbiological contaminants. Naturally aspirated Mopar Wedge big-blocks are quite capable of producing between 600 to 900 horsepower. This book covers how to build Mopar's 383-, 400-, 413-ci, 440-ci engines to these power levels. Discussed is

how to select a stock or aftermarket block for the desired performance level. The reciprocating assembly is examined in detail, so you select the right design and material for durability and performance requirements. Cylinder heads and valve train configurations are crucial for generating maximum horsepower and torque and this volume provides special treatment in this area. Camshafts and lifters are compared and contrasted using hydraulic flat tappet, hydraulic roller and solid flat tappet cams. Also, detailed engine builds at 600, 700, 800, and 900 horsepower levels provide insight and reveal what can be done with real-world component packages.
